

Chapter 2.3: Ordering Rules and Interaction

Learning Objective

After completing this chapter, you will be able to apply the correct sequence of GloBE rules, determine which rule collects Top-Up Tax in any given scenario, and coordinate multiple rules to avoid double taxation.

1. The Three-Layer Rule Order

The GloBE framework operates through a strict priority sequence. Understanding this order is essential—applying rules out of sequence leads to incorrect calculations.

1.1 Priority Sequence

Priority	Rule	Where Tax Is Collected	Article Reference
1st	QDMTT	Low-taxed jurisdiction (source)	Article 5.2.3
2nd	IIR	Parent entity jurisdiction	Article 2.1
3rd	UTPR	Other group jurisdictions	Article 2.4-2.6

Key principle: Each rule only applies to the **residual** Top-Up Tax not collected by higher-priority rules.

2. Master Flowchart: Which Rule Applies?

Top-Up Tax calculated for
Low-Taxed Jurisdiction

3. Layer 1: QDMTT (First Priority)

3.1 What Is QDMTT?

A **Qualified Domestic Minimum Top-Up Tax (QDMTT)** is a domestic law that imposes Top-Up Tax in the low-taxed jurisdiction itself, using GloBE-consistent rules.

3.2 Why QDMTT Has Priority

QDMTT preserves the source jurisdiction's taxing right. Rather than allowing other jurisdictions to collect Top-Up Tax through IIR or UTPR, the low-taxed jurisdiction can collect it domestically.

3.3 QDMTT Offset

When a jurisdiction has a Qualified QDMTT, the Top-Up Tax collected under the QDMTT **reduces** the amount subject to IIR and UTPR (Article 5.2.3).

Formula:

$$\text{Residual Top-Up Tax} = \text{Jurisdictional Top-Up Tax} - \text{QDMTT Paid}$$

3.4 Worked Example: QDMTT Offset

Scenario: SG Ireland Ltd has a jurisdictional Top-Up Tax of €800,000. Ireland has implemented a QDMTT.

Item	Amount
Ireland jurisdictional Top-Up Tax	€800,000
Ireland QDMTT collected	€800,000
Residual for IIR/UTPR	€0

The QDMTT fully covers the Top-Up Tax. No IIR or UTPR applies to this jurisdiction.

4. Layer 2: IIR (Second Priority)

4.1 When IIR Applies

After QDMTT, the IIR applies to any **residual** Top-Up Tax. The IIR is collected at the parent entity level, using the top-down approach from Chapter 2.1.

4.2 IIR Top-Down Cascade

Step	Entity	Condition
1	UPE	Applies IIR if UPE jurisdiction has Qualified IIR
2	IPE	Applies IIR only if UPE jurisdiction lacks Qualified IIR
3	POPE	Applies IIR separately (even if UPE applies IIR) for third-party ownership share

4.3 IIR Offset Mechanism

When multiple entities in the ownership chain apply the IIR (e.g., UPE and POPE both applying), the **IIR offset** prevents double taxation (Article 2.3).

Rule: The higher-tier parent reduces its Allocable Share by the amount charged at the lower-tier entity.

4.4 Worked Example: IIR After QDMTT

Scenario: SG Singapore Pte Ltd has a jurisdictional Top-Up Tax of €2,100,000. Singapore has no QDMTT. Stratos Group plc (UK UPE) owns 100%.

Item	Amount
Singapore jurisdictional Top-Up Tax	€2,100,000
Singapore QDMTT	€0 (no QDMTT)
Residual for IIR	€2,100,000
Stratos's Inclusion Ratio	100%
UK IIR liability	€2,100,000

The full Top-Up Tax is collected through UK IIR.

5. Layer 3: UTPR (Backstop)

5.1 When UTPR Applies

UTPR is the **backstop** mechanism. It only applies when: 1. There is residual Top-Up Tax after QDMTT, AND 2. The IIR does not fully collect the residual (e.g., no Qualified IIR at UPE/IPE level, or minority interests)

5.2 UTPR Scenarios

Scenario	Why UTPR Applies
UPE jurisdiction has no Qualified IIR	IIR cannot apply at UPE; UTPR is backstop
Split ownership (minority interests)	IIR only collects parent's share; UTPR collects minority's share
Low-taxed UPE jurisdiction	UPE jurisdiction itself is undertaxed

5.3 Worked Example: UTPR as Backstop

Scenario: An MNE has a UPE in Country X (no Qualified IIR). Low-taxed subsidiary in Country Y has Top-Up Tax of €500,000. Country Y has no QDMTT.

Item	Amount
Country Y Top-Up Tax	€500,000
QDMTT collected	€0
IIR collected (no Qualified IIR at UPE)	€0
UTPR Top-Up Tax Amount	€500,000

The UTPR allocates €500,000 across jurisdictions with Qualified UTPR using the 50/50 employee/tangible asset formula (Chapter 2.2).

6. Interaction Matrix: All Rules Combined

6.1 Decision Matrix

QDMTT in LTCE Jurisdiction?	Qualified IIR at UPE?	100% Ownership?	Rules That Apply
Yes (full coverage)	Any	Any	QDMTT only
Yes (partial)	Yes	Yes	QDMTT + IIR
Yes (partial)	Yes	No	QDMTT + IIR + UTPR
No	Yes	Yes	IIR only
No	Yes	No	IIR + UTPR
No	No	Any	UTPR only

6.2 Calculation Sequence

When multiple rules apply, follow this calculation order:

1. **Calculate jurisdictional Top-Up Tax** (Part 5 methodology)
2. **Subtract QDMTT** (if applicable) → Residual A
3. **Calculate IIR Allocable Share** on Residual A → Amount collected under IIR
4. **Calculate UTPR** on any remaining amount → Amount allocated to UTPR jurisdictions

7. Comprehensive Worked Example: Stratos Group

7.1 Scenario Overview

Stratos Group has two low-taxed jurisdictions:

Jurisdiction	Top-Up Tax	QDMTT Status	UPE Ownership
Singapore	€2,100,000	No QDMTT	100%
Ireland	€800,000	Qualified QDMTT	100%

UK (UPE jurisdiction) has a Qualified IIR.

7.2 Step 1: Apply QDMTT (Layer 1)

Singapore: - No QDMTT - Residual: €2,100,000

Ireland: - QDMTT: €800,000 - Residual: €800,000 – €800,000 = **€0**

7.3 Step 2: Apply IIR (Layer 2)

Singapore: - Residual from Layer 1: €2,100,000 - UK has Qualified IIR → IIR applies - Stratos's Inclusion Ratio: 100% - IIR collected: $€2,100,000 \times 100\% = €2,100,000$ - Residual: €0

Ireland: - Residual from Layer 1: €0 - No IIR applies (fully covered by QDMTT)

7.4 Step 3: Apply UTPR (Layer 3)

Singapore: - Residual from Layer 2: €0 - No UTPR applies

Ireland: - Residual from Layer 2: €0 - No UTPR applies

7.5 Summary

Jurisdiction	Top-Up Tax	QDMTT	IIR (UK)	UTPR	Total Collected
Singapore	€2,100,000	€0	€2,100,000	€0	€2,100,000
Ireland	€800,000	€800,000	€0	€0	€800,000
Total	€2,900,000	€800,000	€2,100,000	€0	€2,900,000

All Top-Up Tax is collected. No undertaxation remains.

8. Complex Scenario: Split Ownership with Multiple Rules

8.1 Scenario

Stratos owns 70% of a subsidiary in Country Z. Country Z has no QDMTT. Top-Up Tax is €1,000,000.

Item	Amount
Country Z Top-Up Tax	€1,000,000
QDMTT	€0
Stratos's Inclusion Ratio	70%
IIR collected (UK)	$€1,000,000 \times 70\% = €700,000$
Residual for UTPR	$€1,000,000 - €700,000 = €300,000$

The €300,000 attributable to the 30% minority is not collected under IIR and becomes subject to UTPR allocation.

8.2 UTPR Allocation

The €300,000 is allocated across UTPR jurisdictions using the 50/50 formula. Assuming Stratos has operations in Germany, France, and the UK (all with Qualified UTPR):

Jurisdiction	UTPR %	UTPR Allocated
UK	50%	€150,000
Germany	30%	€90,000
France	20%	€60,000
Total	100%	€300,000

8.3 Combined Result

Rule	Amount	Where Collected
QDMTT	€0	—
IIR	€700,000	UK (at Stratos Group plc)
UTPR	€300,000	UK €150K, Germany €90K, France €60K
Total	€1,000,000	Multiple jurisdictions

9. Switch-Over Rule

9.1 Purpose

The **Switch-Over Rule (SOR)** addresses situations where tax treaties may prevent IIR application.

9.2 When SOR Applies

Some tax treaties require a jurisdiction to **exempt** income from foreign permanent establishments (PEs). This exemption could block the IIR from applying to low-taxed PE income.

The SOR allows the parent jurisdiction to **switch** from the exemption method to the **credit method** for PE income that is low-taxed.

9.3 Practical Effect

Without SOR	With SOR
Treaty requires exemption of PE income	Switch to credit method for low-taxed PE income
IIR cannot apply to exempt income	IIR can apply; foreign tax credit given for PE taxes

9.4 When SOR Is Relevant

The SOR is most relevant when:

- The UPE jurisdiction uses exemption method for foreign PE income under treaties
- A PE is located in a low-taxed jurisdiction
- The UPE jurisdiction has implemented the SOR alongside its IIR

Note: Many jurisdictions implementing Pillar Two have adopted the SOR as part of their domestic IIR legislation to ensure comprehensive coverage.

10. Coordination Mechanisms: Preventing Double Taxation

10.1 Mechanism 1: QDMTT Offset

QDMTT reduces Top-Up Tax before IIR/UTPR apply (Article 5.2.3).

10.2 Mechanism 2: IIR Offset

When both UPE and POPE apply IIR, the UPE reduces its share by the POPE's charge (Article 2.3).

10.3 Mechanism 3: UTPR Residual Only

UTPR only applies to amounts **not** collected under QDMTT or IIR.

10.4 Summary: No Double Taxation

Coordination Point	Mechanism
Between QDMTT and IIR	QDMTT reduces Top-Up Tax first
Between UPE IIR and POPE IIR	IIR offset (Article 2.3)
Between IIR and UTPR	UTPR applies to residual only
Between UTPR jurisdictions	Allocation formula divides once

11. Timing and Sequencing

11.1 Calculation Sequence Dependencies

The rule order creates **sequencing dependencies** for calculations:

Step	Must Wait For
QDMTT calculation	Jurisdictional Top-Up Tax (Part 5)
IIR calculation	QDMTT determination
UTPR calculation	IIR determination

11.2 Practical Implication

MNE groups cannot finalise IIR or UTPR calculations until they know: 1. Which jurisdictions have implemented QDMTT 2. The amount of QDMTT collected in each jurisdiction

This requires coordination with local tax teams in QDMTT jurisdictions before completing group-level calculations.

12. Common Pitfalls

12.1 Pitfall 1: Applying IIR Before Considering QDMTT

Always check if the low-taxed jurisdiction has a QDMTT first. QDMTT reduces the amount subject to IIR.

12.2 Pitfall 2: Double-Counting Top-Up Tax

If both QDMTT and IIR apply, don't add them—the IIR only applies to the **residual** after QDMTT.

12.3 Pitfall 3: Forgetting the IIR Offset

When both UPE and POPE apply IIR, apply the offset. Without it, you'll overstate the UPE's liability.

12.4 Pitfall 4: Ignoring UTPR for Minority Interests

Even when IIR applies, split ownership means UTPR may still apply for the minority share not captured by IIR.

12.5 Pitfall 5: Assuming UTPR Never Applies

Many assume UTPR is rare. While less common than IIR, UTPR applies in all split-ownership scenarios where minority interests exist.
